Machine Test – (Sort of e-commerce admin panel)

1. Develop an Admin Panel consists of Product Management Module and Category Management Module.
2. Category Management Module will have
   1. Masters for Main Category
   2. Masters for sub-Categories (Dependent on Main Category)
   3. Masters for Child Categories (Dependent on Sub-Category)
3. Product Management will have
   1. Add Product Details as Product_name, Product Category (as defined in category management), product_description, product_colors
   2. Define Actual Product_price and discounted_price
   3. Add Product Main Image and Galleries
   4. Edit/delete/View Product

Notes:

- Database should be define by migration only.
- You can use Google Search Engine
- You can refer other E-commerce platforms
- Do not need to focus on User Interface Design
- Maintain code structure properly as per the MVC
- Apply proper validations (Client side and Server side)
